

# LMV321, LMV358, LMV324

## General Purpose, Low Voltage, Rail-to-Rail Output Amplifiers

### Features at +2.7V

- 80μA supply current per channel
- 1.2MHz gain bandwidth product
- Output voltage range: 0.01V to 2.69V
- Input voltage range: -0.25V to +1.5V
- 1.5V/μs slew rate
- LMV321 directly replaces other industry standard LMV321 amplifiers; available in SC70-5 and SOT23-5 packages
- LMV358 directly replaces other industry standard LMV358 amplifiers; available in MSOP-8 and SOIC-8 packages
- LMV324 directly replaces other industry standard LMV324 amplifiers; available in TSSOP-14 and SOIC-14 packages
- Fully specified at +2.7V and +5V supplies
- Operating temperature range: -40°C to +125°C

### Applications

- Low cost general purpose applications
- Cellular phones
- Personal data assistants
- A/D buffer
- DSP interface
- Smart card readers
- Portable test instruments
- Keyless entry
- Infrared receivers for remote controls
- Telephone systems
- Audio applications
- Digital still cameras
- Hard disk drives
- MP3 players

### Description

The LMV321 (single), LMV358 (dual), and LMV324 (quad) are a low cost, voltage feedback amplifiers that consume only 80μA of supply current per amplifier. The LMV3XX family is designed to operate from 2.7V (±1.35V) to 5.5V (±2.75V) supplies. The common mode voltage range extends below the negative rail and the output provides rail-to-rail performance.

The LMV3XX family is designed on a CMOS process and provides 1.2MHz of bandwidth and 1.5V/μs of slew rate at a low supply voltage of 2.7V. The combination of low power, rail-to-rail performance, low voltage operation, and tiny package options make the LMV3XX family well suited for use in personal electronics equipment such as cellular handsets, pagers, PDAs, and other battery powered applications.

### Typical Application

## Pin Assignments

### LMV321

### LMV358

### LMV324

## Absolute Maximum Ratings

Parameter	Min.	Max.	Unit
Supply Voltages	0	+6	V
Maximum Junction Temperature	–	+175	°C
Storage Temperature Range	-65	+150	°C
Lead Temperature, 10 seconds	–	+260	°C
Input Voltage Range	-V <sub>S</sub> -0.5	+V <sub>S</sub> +0.5	V

## Recommended Operating Conditions

Parameter	Min.	Max.	Unit
Operating Temperature Range	-40	+125	°C
Power Supply Operating Range	2.5	5.5	V

## Electrical Specifications

(T<sub>C</sub> = 25°C, V<sub>S</sub> = +2.7V, G = 2, R<sub>L</sub> = 10kΩ to V<sub>S</sub>/2, R<sub>f</sub> = 10kΩ, V<sub>O</sub> (DC) = V<sub>CC</sub>/2; unless otherwise noted)

Parameter	Conditions	Min.	Typ.	Max.	Unit
<b>AC Performance</b>					
Gain Bandwidth Product	C <sub>L</sub> = 50pF, R <sub>L</sub> = 2kΩ to V <sub>S</sub> /2		1.2		MHz
Phase Margin			52		deg
Gain Margin			17		dB
Slew Rate	V <sub>O</sub> = 1V <sub>pp</sub>		1.5		V/μs
Input Voltage Noise	>50kHz		36		nV/√Hz
Crosstalk: LMV358	100kHz		91		dB
LMV324	100kHz		80		dB
<b>DC Performance</b>					
Input Offset Voltage <sup>1</sup>			1.7	7	mV
Average Drift			8		μV/°C
Input Bias Current <sup>2</sup>			<1		nA
Input Offset Current <sup>2</sup>			<1		nA
Power Supply Rejection Ratio <sup>1</sup>	DC	50	65		dB
Supply Current (Per Channel) <sup>1</sup>			80	120	μA
<b>Input Characteristics</b>					
Input Common Mode Voltage Range <sup>1</sup>	LO	0	-0.25		V
	HI		1.5	1.3	V
Common Mode Rejection Ratio <sup>1</sup>		50	70		dB
<b>Output Characteristics</b>					
Output Voltage Swing	R <sub>L</sub> = 10kΩ to V <sub>S</sub> /2; LO <sup>1</sup>	0.1	0.01		V
	R <sub>L</sub> = 10kΩ to V <sub>S</sub> /2; HI <sup>1</sup>		2.69	2.6	V

Min/max ratings are based on product characterization and simulation. Individual parameters are tested as noted. Outgoing quality levels are determined from tested parameters.

### Notes:

1. Guaranteed by testing or statistical analysis at +25°C.
2. +IN and -IN are gates to CMOS transistors with typical input bias current of <1nA. CMOS leakage is too small to practically measure.

## Electrical Specifications

( $T_C = 25^\circ\text{C}$ ,  $V_S = +5\text{V}$ ,  $G = 2$ ,  $R_L = 10\text{k}\Omega$  to  $V_S/2$ ,  $R_f = 10\text{k}\Omega$ ,  $V_O(\text{DC}) = V_{CC}/2$ ; unless otherwise noted)

Parameter	Conditions	Min.	Typ.	Max.	Unit
<b>AC Performance</b>					
Gain Bandwidth Product	$C_L = 50\text{pF}$ , $R_L = 2\text{k}\Omega$ to $V_S/2$		1.4		MHz
Phase Margin			73		deg

	sinking; $V_O = 5\text{V}$	10	-23		mA

Min/max ratings are based on product characterization and simulation. Individual parameters are tested as noted. Outgoing quality levels are determined from tested parameters.

### Notes:

1. Guaranteed by testing or statistical analysis at  $+25^\circ\text{C}$ .
2. +IN and -IN are gates to CMOS transistors with typical input bias current of  $<1\text{nA}$ . CMOS leakage is too small to practically measure.

## Package Thermal Resistance

Package	$\theta_{JA}$
5 lead SC70	331.4°C/W
5 lead SOT23	256°C/W
8 lead SOIC	152°C/W
8 lead MSOP	206°C/W
14 lead TSSOP	100°C/W
14 lead SOIC	88°C/W

## Typical Operating Characteristics

( $T_C = 25^\circ\text{C}$ ,  $V_S = +5\text{V}$ ,  $G = 2$ ,  $R_L = 10\text{k}\Omega$  to  $V_S/2$ ,  $R_f = 10\text{k}\Omega$ ,  $V_O(\text{DC}) = V_{CC}/2$ ; unless otherwise noted)

## Typical Operating Characteristics

( $T_C = 25^\circ\text{C}$ ,  $V_S = +5\text{V}$ ,  $G = 2$ ,  $R_L = 10\text{k}\Omega$  to  $V_S/2$ ,  $R_f = 10\text{k}\Omega$ ,  $V_O(\text{DC}) = V_{CC}/2$ ; unless otherwise noted)

## Application Information

### General Description

The LMV3XX family are single supply, general purpose, voltage-feedback amplifiers that are pin-for-pin compatible and drop in replacements with other industry standard LMV321, LMV358, and LMV324 amplifiers. The LMV3XX family is fabricated on a CMOS process, features a rail-to-rail output, and is unity gain stable.

The typical non-inverting circuit schematic is shown in Figure

1. **Figure 1: Typical Non-inverting configuration**

### Power Dissipation

The maximum internal power dissipation allowed is directly related to the maximum junction temperature. If the maximum junction temperature exceeds 150°C, some performance degradation will occur. If the maximum junction temperature exceeds 175°C for an extended time, device failure may occur.

### Driving Capacitive Loads

The **Frequency Response vs  $C_L$**  plot on page 4, illustrates the response of the LMV3XX family. A small series resistance ( $R_s$ ) at the output of the amplifier, illustrated in Figure 2, will improve stability and settling performance.  $R_s$  values in the **Frequency Response vs  $C_L$**  plot were chosen to achieve maximum bandwidth with less than 1dB of peaking. For maximum flatness, use a larger  $R_s$ . As the plot indicates, the LMV3XX family can easily drive a 200pF capacitive load without a series resistance. For comparison, the plot also shows the LMV321 driving a 200pF load with a 225Ω series resistance.

Driving a capacitive load introduces phase-lag into the output signal, which reduces phase margin in the amplifier. The unity gain follower is the most sensitive configuration. In a unity gain follower configuration, the LMV3XX family requires a 450Ω series resistor to drive a 200pF load. The response is illustrated in Figure 3.

**Figure 2: Typical Topology for driving a capacitive load**

**Figure 3: Frequency Response vs  $C_L$  for unity gain configuration**

### Layout Considerations

General layout and supply bypassing play major roles in high frequency performance. Fairchild has evaluation boards to use as a guide for high frequency layout and as aid in device testing and characterization. Follow the steps below as a basis for high frequency layout:

- Include 6.8μF and 0.01μF ceramic capacitors
- Place the 6.8μF capacitor within 0.75 inches of the power pin
- Place the 0.01μF capacitor within 0.1 inches of the power pin
- Remove the ground plane under and around the part, especially near the input and output pins to reduce parasitic capacitance
- Minimize all trace lengths to reduce series inductances

Refer to the evaluation board layouts shown in Figure 5 on page 8 for more information.

## Evaluation Board Information

The following evaluation boards are available to aid in the testing and layout of this device:

Eval Bd	Description	Products
KEB013	Single Channel, Dual Supply, SOT23-5 for buffer-style pinout	LMV321AS5X
KEB014	Single Channel, Dual Supply, SC70-5 for buffer-style pinout	LMV321AP5X
KEB006	Dual Channel, Dual Supply, 8 lead SOIC	LMV358AM8X
KEB010	Dual Channel, Dual Supply, 8 lead MSOP	LMV358AMU8X
KEB012	Quad Channel, Dual Supply, 14 lead TSSOP	LMV324AMTC14X
KEB018	Quad Channel, Dual Supply, 14 lead SOIC	LMV324AM14X

Evaluation board schematics and layouts are shown in Figures 4 and 5.

## ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

## PRODUCT STATUS DEFINITIONS

### Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
