6 Impedance

Expressed by three figures. The unit is in ohm (Ω) . The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

6Performance

Expressed by a letter.

On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

Chip Ferrite Bead **BLM** Series

Essential for Noise Suppression in High Speed Signal Lines and DC Power Lines

The chip ferrite bead BLM series comprises ferrite beads in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

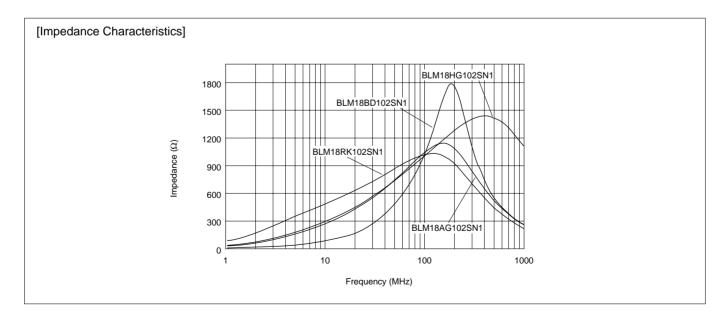

Chip sizes of 0.6x0.3, 1.0x0.5, 1.6x0.8, 2.0x1.25, 3.2x1.6 and 4.5x1.6mm are cataloged. (The BLA series of array type chip ferrite beads is also cataloged.)

The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

■Features

The BLM series comprises the R series (for digital interface), the A series (for standard), the B series (for high speed signal), the P series (for large current), and the H/E/G series (for GHz range noise suppression).

- BLM R series For Digital Interface
 The BLM-R series can be used in Digital Interface.
 Resistance of BLM-R series especially grows in the lower frequency range. Therefore BLM-R series is less effective for digital signal waveform at low frequency range and can suppress the ringing.
- BLM A/T series For Standard
 The BLM-A series generates an impedance from the relatively low frequencies. Therefore the BLM-A series is effective in noise suppression in the wide frequency range (30MHz several hundred MHz).
- BLM B series For High Speed Signal
 The BLM-B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics.
 Various impedances are available to match signal frequency.
- 4. BLM P series For Large Current The BLM-P series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC (BLM41P).
- BLM H/E/G series For GHz Range Noise Suppression
 The BLM H/E/G series has a modified internal
 electrode structure that minimizes stray capacitance and
 increases the effective frequency range.

Note Please read rating and \(\triangle CAUTION \) (for storage, operating, rating, soldering, mounting and handling) in this PDF catalog to prevent smoking and/or burning, etc. This catalog has only typical specifications. Therefore, you are requested to approve our product specifications or to transact the approval sheet for product specifications.

Chip Ferrite Beads BLM03/BLM15/BLM18/BLM21/BLM31/BLM41 Series

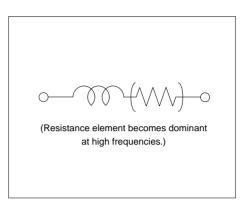

■ Features (BLM_A Series)

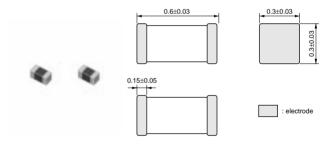

The chip ferrite bead BLM series comprises ferrite beads in the shape of a chip. This ferrite bead generates a high impedance which at high frequency mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. BLM_A series generates an impedance from the relatively low frequencies. Therefore BLM_A series is effective in noise suppression in a wide frequency range (30MHz - several hundred MHz). The small size of BLM03 series (0.6x0.3mm) is suitable for noise suppression in small equipment such as PA modules for cellular phones.

BLM03A Series (0201 Size)

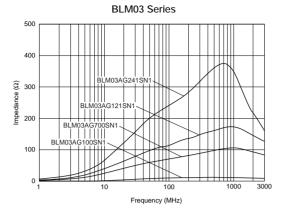

■ Equivalent Circuit

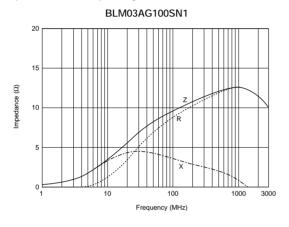

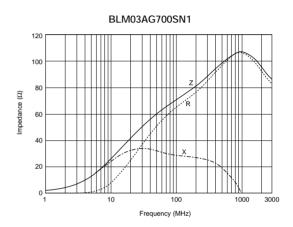

| Part Number | Impedance (at 100MHz/20°C) (ohm) | Rated Current (mA) | DC Resistance (max.) (ohm) | Operating Temperature Range (°C) |
|-------------------------------|--|--------------------|-------------------------------|--|
| BLM03AG100SN1 | 10 (Typ.) | 500 | 0.1 | -55 to +125 |
| BLM03AG700SN1 | 70 (Typ.) | 200 | 0.5 | -55 to +125 |
| BLM03AG121SN1 | IG121SN1 120 ±25% | | 0.8 | -55 to +125 |
| BLM03AG241SN1 240 ±25% | | 100 | 1.0 | -55 to +125 |
