

3.3V, 1-Port, SATA2 *i/m* ReDriver™ with Equalization and Output Emphasis

Features

- SATA *i/m* output drive
- Two 3.2Gbps differential signal pairs
- Adjustable Output Emphasis
- 100-Ohm Differential CML I/O's
- Input signal level detect and squelch for each channel
- OOB fully supported
- Low Power (180mW per Channel)
- Stand-by Mode – Power Down State
- V_{DD} Operating Range: 3.3V ± 10%
- Packaging (Pb-free & Green):
→ 20-lead SSOP

Description

Pericom Semiconductor's PI3EQX3811C ReDriver is a low-power signal conditioner. The device provides programmable output emphasis by using 2 select bits, EMA and EMB, to optimize performance over a variety of physical mediums by reducing Inter-Symbol Interference. PI3EQX3811C supports two 100-Ohm Differential CML data I/O's between the Protocol ASIC to a switch fabric, across a backplane, or to extend the signals across other distant data pathways on the user's platform.

The integrated equalization circuitry provides flexibility with signal integrity of the signal before the ReDriver. Whereas the integrated de-emphasis circuitry provides flexibility with signal integrity of the signal after the ReDriver.

A low-level input signal detection and output squelch function is provided for each channel. Each channel operates fully independently. When the channels are enabled (EN=1) and operating, a channel's input signal level (on xI+/-) determines whether the output is enabled. If the input level of the channel falls below the active threshold level (V_{th}-) then the outputs are driven to the common mode voltage.

In addition to providing signal re-conditioning, Pericom's PI3EQX3811C also provides power management Stand-by mode operated by the Enable pin.

Pin Description

Pin #	Pin Name	I/O	Description
3 4	AI+ AI-	I I	CML Inputs Channel A with internal 50-Ohm pull-up to internal bias voltage
18 17	AO+ AO-	O O	CML Outputs Channel A with internal 50-Ohm pull-up to internal bias voltage
14 13	BI+ BI-	I I	CML Inputs Channel B with internal 50-Ohm pull-up to internal bias voltage
7 8	BO+ BO-	O O	CML Outputs Channel B with internal 50-Ohm pull-up to internal bias voltage
20	EN	I	EN is the enable pin with 50K-Ohm internal pull-up to V _{DD} . A LVCMOS high provides normal operation. A LVCMOS low selects a low power down mode.
5, 9, 12, 16	GND	PWR	Supply Ground
1 10	EMA EMB	I I	Selection pins for output emphasis level (see Output Emphasis Selection Table), with 50k-Ohm internal pull-up to V _{DD} .
2, 6, 15, 19	V _{DD}	PWR	3.3V ±10% Supply Voltage
11	NC	-	Do Not Connect

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

Storage Temperature.....	–65°C to +150°C
Supply Voltage to Ground Potential	–0.5V to +4.6V
DC SIG Voltage.....	–0.5V to V _{DD} +0.5V
Current Output	–25mA to +25mA
Power Dissipation Continuous	500mW
Operating Temperature.....	0 to +70°C

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Notes:

- Using K28.7 (0011111000) pattern).
- The parameter is determined by device characterization, and is not production tested
- Recommended AC output coupling capacitor is 4.7nF to 12nF at each output signal pin.
