

RoHS compliant,
lead-free SMD
package

FUNCTION

- Omnidirectional movement sensing
- Chatters open / closed when tilted or vibrated in any direction regardless of orientation
- Normally closed when at rest

FEATURES

- **Ultra low power** - As little as 0.25 uA continuous
- **Surface mount device (SMD)** - RoHS compliant, lead-free, tape and reel
- **High sensitivity & long life** - 99.97% pure gold plating
- **Miniature size** - 3.3 mm x 6.9 mm
- **Simple interface** - No signal conditioning required
- **Quiet** - Undetectable sounds level

APPLICATIONS

- Motion triggered wake-up
- GPS tracking, RFID, alarms, automotive
- Security, anti-tamper, anti-theft
- Vibration sensing, tilt detection

FUNCTIONAL REPLACEMENT FOR

- SQ-SEN-003P
- SQ-SEN-003PS
- SQ-SEN-003PS-XL

PATENTS

- US 7326866, 7067748, 7326867, 7421793.
Patents pending.

DESCRIPTION

The SQ-SEN-200 series sensor acts like a normally closed switch which chatters open and closed as it is tilted or vibrated. Unlike other rolling-ball sensors, the 200 is truly an omnidirectional movement sensor. It will function regardless of how it is mounted or aligned.

When at rest, it normally settles in a closed state. When in motion, it will produce continuous on/off contact closures. It is sensitive to both tilt (static acceleration) and vibration (dynamic acceleration). The sensor can be easily used to produce a series of CMOS or TTL level logic level or pulse train using a single resistor to limit current. The signal level can be read directly by a digital input. This can be used to interrupt (wake up) a microcontroller or can be counted to estimate the amount and duration of activity. The sensor is fully passive, requires no signal conditioning, and draws as little as 0.25uA of continuous current.

THEORY OF OPERATION

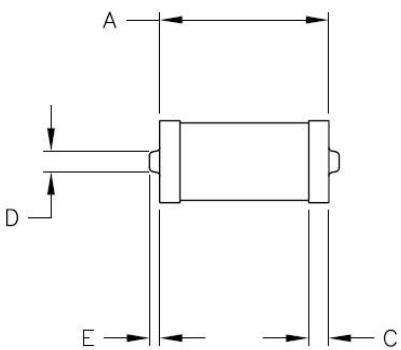

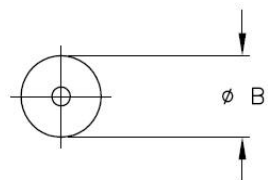

The SQ-SEN-200 series sensor acts like a normally closed switch which chatters open and closed as it is tilted or vibrated. Note that the SQ-SEN-200 is not guaranteed to be closed—even when the sensing mechanism is at rest. However, a good rule of thumb is that 75% - 95% of the time (depending on orientation) when the sensor is at rest it will be closed. The engineer should design his or her software to look for high-to-low and low-to-high edge transitions rather than an open of closed state of the switch.

ELECTRICAL CHARACTERISTICS

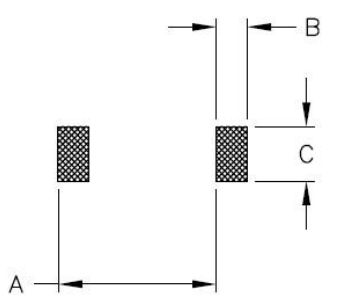

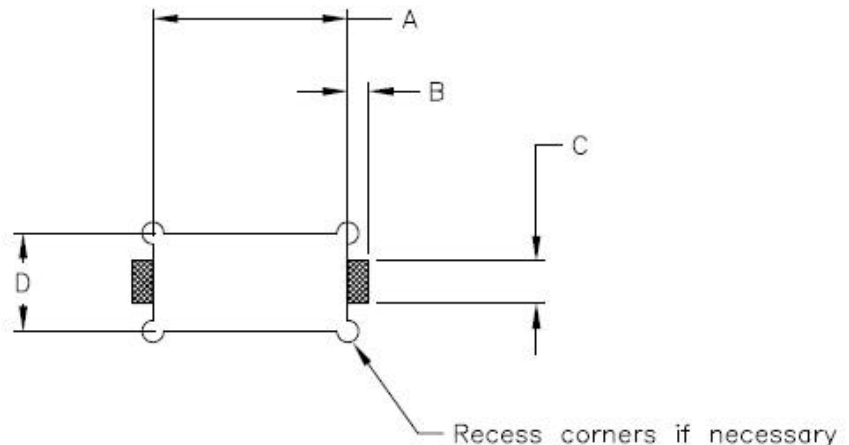

PARAMETER	MIN	MAX	UNITS
Supply Voltage Range	0.5	12	Vdc
Current Sink*	0.00025	5	mA

* Current consumption is determined by the resistance of the application circuit and the supply voltage.

DIMENSIONS

LIMITATIONS AND WARNINGS

This product is not designed for use in life support and/or safety equipment where malfunction of the product can reasonably be expected to result in personal injury or death. Buyer uses this product in such applications at Buyer's own risk and agrees to defend, indemnify, and hold harmless SignalQuest, Inc. from any and all damages, claims, suits, or expenses resulting from such misuse.

TESTING

The performance of each sensor is verified through build-time testing.

SYSTEM INTEGRATION TESTING

Thorough testing should be carried out prior to product release to ensure system integration has not introduced unforeseen problems. The system integrator assumes the ultimate responsibility for the safety of the target application.
