

Description

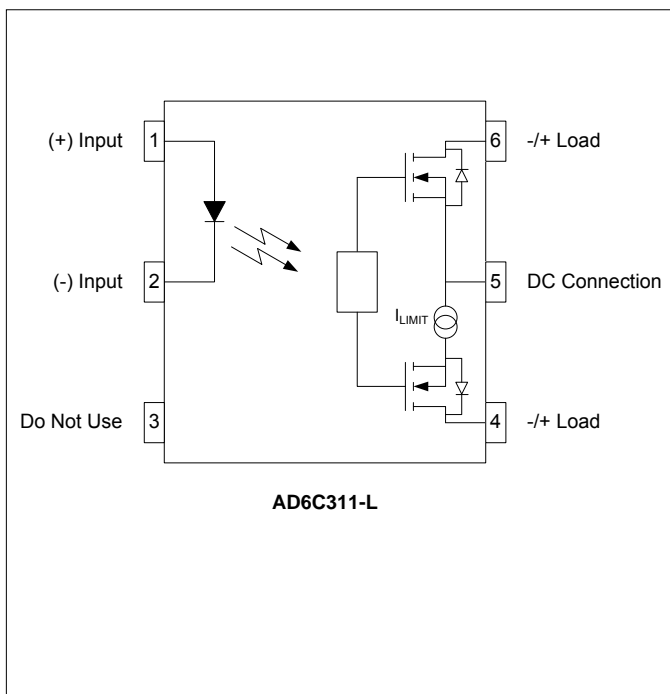

The AD6C311-L is a bi-directional, single-pole, single-throw, normally open solid-state relay. It provides a load current of 200mA, a high blocking voltage of 400V, and current limiting circuitry in a compact 6 pin DIP package. Current limiting circuitry provides a level of protection against increased load currents or transient current spikes by active current reduction across the device, thereby protecting itself and downstream components.

The AD6C311-L comes standard in a miniature 6 pin DIP package making it ideal for high-density board applications.

Applications

- Reed Relay Replacement
- Multiplexers
- Meter Reading Systems
