EMC Components

Chip beads For power line MPZ series

⊗TDK

MPZ1608 type

FEATURES

- Noise reduction solution for power line.
- O Compared to the MMZ series, has low direct current resistance for compatibility with large currents, optimal for low power consumption.
- O Various frequency characteristics with 5 materials of different features for countermeasures against everything from general signals to high-speed signals.
- O Performs well even in signal lines where low direct current resistance is required.
- Operating temperature range: –55 to +125°C

APPLICATION

- O Noise removal for mobile devices such as smartphones and tablet terminals, and various modules.
- O Noise removal for PCs and recorders, household appliances such as STBs, smart grids, and industrial equipment.

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

| The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH o less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. | | | | | |
|--|---|--|--|--|--|
| \bigcirc Do not use or store in locations where there are conditions such as | \bigcirc Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.). | | | | |
| Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C. | | | | | |
| Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur. | | | | | |
| When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions. | | | | | |
| Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design. | | | | | |
| Carefully lay out the coil for the circuit board design of the non-magn A malfunction may occur due to magnetic interference. | netic shield type. | | | | |
| \bigcirc Use a wrist band to discharge static electricity in your body through | the grounding wire. | | | | |
| \bigcirc Do not expose the products to magnets or magnetic fields. | | | | | |
| \bigcirc Do not use for a purpose outside of the contents regulated in the de | livery specifications. | | | | |
