# AMP Metrimate Pin and Socket Connectors

**Product Facts**

- Recognized under the Component Program of Underwriters Laboratories Inc., File No. E28476 
- Certified by Canadian Standards Association, File No. LR7189 
- Tested to VDE requirements outlined in VDE Test Report No. 4751-1431-1029/AII 
- Produced under a Quality Management System certified to ISO 9001 

A copy of the certificate is available upon request.
- Designed to meet IEC (440 V) requirements
- True metric dimensions—contacts on 5 [.197] centers (drawer connectors and special in-line connectors and pin headers have contacts on 5.08 [.200] centers)
- Panel mount versions require no hardware for mounting
- Polarized housings
- 4- thru 36-position square grid configurations can be mounted to and removed from either front or rear of panel
- Housings made of UL rated 94V-0 thermoplastic
- Strain reliefs available for 6- thru 36-position square grid, panel mount housings
- Drawer connectors available in 4- thru 30-position sizes, standard and low profile versions

AMP Metrimate connectors are true metric specification connectors designed for panel, free-hanging or pc board application. These connectors offer improvements in durability, density and electrical performance over competitive soft shell pin and socket connectors. They are ideally suited for equipment manufacturers engaged in both national and international markets. This versatile pin and socket connector line is designed to meet the general requirements of various testing and approval agencies, including UL, CSA, VDE and IEC.

Presently, connectors are available in various design configurations and the most popular sizes to satisfy a variety of application requirements. Such designs include: square grid connectors for free-hanging and/or panel mounting; free-hanging in-line connectors; square grid and in-line pin and socket headers for pc board mounting; and drawer connectors for rack and panel mounting with radial float.

For high electrical performance and maximum economy, all connectors employ housings made of UL rated 94V-0 thermoplastic.

## Performance Characteristics

### Electrical Characteristics

Voltage Rating: UL (600 VAC and VDC), CSA (600 VAC and VDC), VDE (380 VAC, 450 VDC), IEC (440 V)

Dielectric Strength: 2000 Volts, RMS (at sea level)

Current Rating: See contact current carrying capability data below.

Insulation Resistance: 5000 Megohms (Min.)

Termination Resistance: Dependent upon individual contact type. Refer to applicable Product Specification. (Technical Documents, page 58).

### Environmental Characteristics

Temperature Range: -55°C to +130°C [-67°F to +266°F]

### Mechanical Characteristics

Air Gap: Exceeds 3.2 [.125]

Creep Distance: Exceeds 4 [.157]

Mounting Distance (Live Contact-to-Panel): Exceeds 6 [.237]

Acceptable Panel Thicknesses: 0.8-2.3 [.030-.090]

### Contact Current Carrying Capability

\*Based on single contact free air conditions.  
 1. .125 POWERBAND - Precision formed pins & sockets.  
 2. High Current Louvertac - Screw machined pin & socket contacts.  
 Both versions feature the AMP Louvertac springs for superior current carrying, heat transfer and durability performance. See catalog 65141.

The total current capacity of each contact in a connector is dependent upon the heat rise resulting from the combination of electrical loads on all the contacts in the connector arrangement and the maximum ambient temperature in which the connector will be operating. Caution must be taken to assure that these combinations of conditions do not cause the internal temperature of the connector to exceed the maximum operating temperature of the housing material. There are several variables which must be considered when determining this maximum current carrying capability for your application.

These variables are:

- a. Wire Size-Larger wire will carry more current since it has less resistance to current flow; therefore, it generates less heat. The wire also conducts heat away from the connector.
- b. Connector Size-In general, the more circuits in a connector, the less current per contact can be carried.
- c. Ambient Temperature - The higher the ambient temperature, the less current can be carried.

## Performance Characteristics (Continued)

### Current Rating Verification

#### Can a contact rated at 10 amperes carry 10 amperes?

Maybe yes, but probably not. The reason lies in the test conditions used to rate the contact. If these conditions do not adequately reflect the application conditions, the actual allowable current levels may be lower than specified levels. For example, many manufacturers, including Tyco Electronics, test a single contact in air. This gives an accurate measure of the basic current-carrying capacity of the contact. Use the contact alone in air and it can certainly carry 10 amperes. Use it in a multi-position connector surrounded by other current-carrying contacts or in high ambient temperatures, and the contact should carry less current.

Similarly, as the contact ages and stress relaxation, environmental cycling, and other degradation factors take their toll, the contact's current-carrying capacity decreases. A prudent design must set current levels for such end-of-design-life (EODL) conditions.

Practical current-carrying capacity is not an absolute, but an application-dependent condition.

#### New Method Simplifies Ratings

To help the designer set the appropriate current level, Tyco Electronics has developed a method of specifying current-carrying capacity. This method takes into account the various application factors that influence current rating.

#### The method can be summarized as follows:

- The contact is aged to EODL conditions by durability cycling, thermal cycling, and environmental exposure.
- The contact's resistance stability is verified.
- The current necessary to produce the specified temperature rise is measured. This T-rise is usually 30°C.
- A rating factor is determined to allow derating of multiple contacts in the same housing and for different conductor sizes.

#### Temperature

One other factor influencing current levels is the maximum operating temperature, for example, 105°C. If the application has a high ambient temperature (over 75°C) the contact's T-rise is limited by the maximum operating temperature. For example, an application temperature of 90°C limits the contact T-rise to 15°C. Since current produces heat (the I<sup>2</sup>R law), the current must be lowered to limit the T-rise.

A contact's T-rise depends not only on its I<sup>2</sup>R Joule heating, but also on its ability to dissipate the heat. Consider a contact in a multi-contact housing. Joule heating in multiple contacts will raise the local ambient temperature. Since the contact will not be able to dissipate its own heat as well by convection, the maximum T-rise will be realized at a lower current level. Consequently, the allowable current level must be lower to maintain an acceptable T-rise.

For a given connector, the current level will be set by the loading density. A connector containing 50% current-carrying contacts will permit higher currents (per contact) than a connector will at 75% loading. The loading percentage assumes an even distribution of contacts within the housing. If all 10 contacts are grouped together in one section of a 20-position connector, the loading density may approach 100%.

#### The Importance of EODL

As stated, T-rise in a contact depends on both resistance and current. As it ages, a contact's resistance will increase. The contact designer will specify a maximum resistance for the contact, this level is the end-of-design-life resistance. Before the contact is tested for current, Tyco Electronics subjects it to a sequence of tests that exercise many major failure mechanisms and thereby simulates EODL conditions. Conditioning includes mating cycling, industrial mixed-flowing gases, humidity and temperature cycling, and vibration to sequentially introduce wear, corrosion, stress relaxation, and mechanical disturbance.

#### Presentation

The presentation of current-carrying capacity in Tyco Electronics product specifications includes two parts:

- First, a base curve showing current levels versus T-rise for a single circuit and the largest wire size. This represents the maximum current capacity of the

**Performance Characteristics** (Continued)

contact. The curve is usually flat up to 75°C ambient and then drops off. Up to 75°C, the 30°C T-rise limits the amount of current, and above 75°C the current must be reduced to keep the combination of ambient temperature and T-rise from exceeding the maximum operating temperature of 105°C.

- Next are rating factors, a table of multipliers to account for connector loading and for smaller wire sizes. The designer first determines the base current for the ambient conditions of the application, then multiplies this base current by the rating factors to find the current level for the application's loading factor and wire size.

**Practical Values**

The current-rating method gives designers practical values applicable to their applications. While the specified current levels for a contact may be lower than for other testing methods, they are more realistic and simplify the system design process.

"Spec-manship" is replaced by a realistic assessment of the current-carrying capacity of a contact under varying conditions of temperature, connector loading, and wire size.

**An Example:**

To demonstrate the method of specifying current, consider the following application conditions, an ambient temperature of 65°C, a 50% loading of contacts in the housing, and 20 AWG [0.6 mm<sup>2</sup>] wire.

- From Figure 1, the base current rating is 14 ampere with 18 AWG [0.8 mm<sup>2</sup>] wire.
- Figure 2, the rating factor for 50% loading and 20 AWG [0.6 mm<sup>2</sup>] wire is 0.68.
- The specific rating for this application is the product of the base rating and the rating factor:  
 $14 \times 0.68 = 9.5$  ampere
- Each of the contacts can carry 9.5 ampere.
- However, if the ambient temperature is 80°C the allowable T-rise becomes 25°C. The base current must be lowered to 12.8 ampere so that the 105°C maximum operating temperature is not exceeded. The current rating then becomes:  
 $12.8 \times 0.68 = 8.7$  ampere.

**Figure 1**

Graph shows the relationship between base current, ambient temperature, and contact T-rise.

		AWG				
		18	20	22	24	26
% Loading	Single	1	.83	.69	.59	.50
	30%	.97	.80	.66	.57	.49
	50%	.83	.68	.57	.48	.42
	70%	.65	.53	.45	.38	.33
	100%	.55	.45	.38	.32	.28

**Figure 2**

Rating factors allow the base current to be adjusted for various connector loading and wire sizes.

<sup>3</sup>Bright tin on entire contact.

<sup>4</sup>Designed for up to 14 AWG; but, not to exceed current limitation of contact.

Note: These contacts can be used in Multimater contact cavities of all connector housings.

‡Single contact, free-air test current is not to be construed as contact rating current. Use only for testing.

Refer to contact current carrying capability information on page 8.

Extraction Tool Part No. 305183

## Power Contacts - High Current Upgrade

### Type II and Type III+, Size 16

The features of the High Current Size 16 contact have been designed to fit into the existing AMP Multimate Connectors such as CPC (Circular Plastic Connector), CMC (Circular Metal Connector), G Series, M Series, Econoseal, Metrimate Square Grid and Drawer Connector housings. An initial T-Rise test in free air has shown a 23 amp capability with a 30°C T-Rise. The contact may be crimped onto 14 AWG wire with a Tyco Electronics hand tool P/N 601967-1. Use turret TH502 (1-601967-6) for the pin and turret TH501 (1-601967-5) for the socket.

#### Material

**Power Contacts - High Current Upgrade** (Continued)

**Metrimate Drawer Connector, Size 8**

The Louvertac bands have the versatility of being designed into contact dimensions used in existing Tyco Electronics connectors.

Metrimate High Current contacts have been designed to fit into the existing Drawer Connector housings. A fully energized 8 position connector with 8 gage wires can handle 30 amps per line with a 30°C T-rise on either the cable-to-cable or cable-to-board.

**Cable-to-Cable Material**

- Contact Body** - Copper Alloys
- Louvertac Band** - Beryllium Copper
- Retention Spring** - Stainless Steel
- Finish** - Gold

**Product Specification**

108-1449 Metrimate Pin and Socket with Louvertac High Current Contact

**Connector Voltage Rating** - 600 VAC

- **Recognized under the Component Program of Underwriters Laboratories Inc.,**  **File No. E28476**
- **Certified by Canadian Standards Association,**  **File No. LR7189A**

**Cable-to-Board Material**

- Contact Body** - Copper Alloys
- Louvertac Band** - Beryllium Copper
- Retention Spring** - Stainless Steel
- Finish** - Gold

A typical application would have solder tail pins mounted into the receptacle and crimp socket mounted into the plug.

## Drawer Connectors

### Standard Drawer Connector Panel Mount

#### Product Facts

- 4-, 12-, 19- and 25-position connectors for Size 16 contacts
- 8-position connector for Size 8 power contacts, and a 15-position connector for 3 Size 8 power contacts and 12 Size 16 contacts
- Provides “blind” mating with up to 2.3 [.090] misalignment in any direction
- Guide pins molded into plug half
- Plug and receptacle can be front- or rear-panel mounted

#### Material

Black glass-filled thermoplastic, 94V-0 rated

### 18 Position Hybrid Drawer Connector Right-Angle Header Part No. 213942-6

#### Product Facts

- 13 signal (Type III+)
- Two Size 8 Power—HOT PLUGGABLE! (10 amps AC)
- Three .125 POWERBAND Contacts

No. of Positions	Plug (for sockets)	Receptacle		Page No.
		Header	Housing	
23	213766-1	213768-4	—	29
30	213973-1	—	213974-1	30
18*	213940-1	213942-6	—	27, 28

\*5 power, 13 signal

#### Material and Finish

Housing - Black glass-filled thermoplastic, 94V-0 rated

Contacts - Copper alloy duplex plated 0.00076 [.000030] min. gold on mating end, tin on termination end, with entire contact nickel underplated

Recommended PC Board Layout

## Commoning Connectors

### Product Facts

- **36-circuit commoning system**
- **Choice of bussing configurations: full bus and split bus of 8-8-8-8-4.** Other arrangements are available, consult Tyco Electronics.
- **Compact design: 95.1 [3.744] x 33 [1.300]**
- **Mounts onto machine frame and other panel areas**

### Material and Finish

**Contacts** - Copper alloy, tin plated

- Notes:**
1. See chart below for bus configurations.
  2. These connectors mate with 36-circuit Square Grid Plug **Part No. 207019-1** (page 31).
  3. Dimensional tolerances are not illustrated. This information is available on engineering drawings; use product part number when ordering drawings.

Bus Configuration	Commoning Arrangements	Part Number
Split 8-8-8-8-4	1 thru 8	208062-8
	9 thru 16	
	17 thru 24	
	25 thru 32	
Full	33 thru 36	208062-9
	All Circuits Common	

## Power Distribution Connectors

### Product Facts

- **36-circuit power distribution system**
- **High current capability**
- **Compact design: 95.1 [3.744] x 33 [1.300]**
- **Accommodates one or two voltages (with split bus)**

Bus Configuration	Contact Plating	Connector Part No.
Full Bus	Tin	208063-5
Split Bus (See Note 1.)	Tin	208063-6
	Gold/ Nickel <sup>1</sup>	208063-7

<sup>1</sup>0.00076 [.000030] gold on mating area, 0.00381 [.000150] tin on remainder, both over 0.00127 [.000050] nickel.

- Notes:**
1. Copper bus for **Part Nos. 208063-6** and **208063-7** is divided lengthwise, providing dual 18-circuit buses. Other bussing configurations can be made available, consult Tyco Electronics.
  2. These connectors mate with 36-circuit Square Grid Receptacle **Part No. 207020-1** (page 31).
  3. Dimensional tolerances are not illustrated. This information is available on Tyco Electronics engineering drawings; use product part number when ordering drawings.

### Heat Rise Characteristics

The following graph indicates the maximum temperature rise of a power distribution connector with various currents being applied. The specific connector under test is a fully bussed, 36-circuit power distribution connector with 7-8 mm<sup>2</sup> [8 AWG] input wire. The mating connector is a standard 36-circuit Metrimate receptacle with all contacts terminated to 1219 [48] leads using 2 mm<sup>2</sup> [14 AWG] wire.

- A – 13 amperes, one central contact.
- B – 13 amperes (combined), two adjacent central contacts.
- C – 20 amperes (combined), four central contacts.
- D – 40 amperes (combined), four central contacts.
- E – 60 amperes (combined), four central, three end contacts.
- F – 50 amperes (combined), four corner contacts.
- G – 100 amperes (combined), 36 contacts.
- H – 155 amperes (combined), 36 contacts.

## Application Tooling

### Mechanical Hand Tools for Interchangeable Die Sets

These tools are ideal for small production, prototype and experimental applications. They are used for terminating pin and socket contacts to wire and feature a ratchet device to provide consistently formed crimps.

### SDE (Standard Die Envelope) Die Sets

SDE die sets provide cost-effective flexibility, through many options for a common die-set outline. The SDE die sets can be adapted for use with CERTI-CRIMP hand tools, PRO-CRIMPER III hand tools, the SDE Terminator and the 626 Pneumatic Tool System.

For more information, request Catalog **1654003**.

### PRO-CRIMPER III Hand Tool, Part No. 58495-1

Commercial grade hand tool for crimping various products. Features ratchet control to provide complete crimp cycle. Accepts both pinned- and shouldered-style die sets. Locators are provided with pinned-style die sets for proper contact and wire positioning, and to help minimize contact rotation and bending during crimping. Approximate weight 1.3 lb [0.60 kg].

For use with Type III+ contacts, see pages 17-19. For more information, request Catalog **1773379-1**, Instruction Sheet **408-9930**.

### CERTI-CRIMP Straight Action Hand Tools (SAHT)

172076

Premium grade hand tools. Feature ratchet control to provide complete crimp cycle. Die sets close in a straight line. Include a contact locator and wire stop, plus an insulation crimp adjustment lever, when applicable. Approximate weight 1.3 lb [0.59 kg].

For Type III+ contacts, see pages 17-19. For more information, request Catalog **65780**.

### CERTI-CRIMP "C" Head Straight Action Hand Tool (SAHT), Part No. 69710-1

920648

Premium grade hand tool. Features ratchet control to provide complete crimp cycle. The interchangeable die sets close in a straight line to minimize contact or terminal rotation during crimping. When applicable, user-assist features such as a contact or terminal locator and a wire stop, are built into the die set. Approximate weight 1.9 lb [0.86 kg].

For subminiature coaxial contacts, see pages 22-23. For more information, request Catalog **65780**, Instruction Sheet 408-2095.

### Electric Machine for Interchangeable Die Sets

### SDE Terminator, Part No. 1490076-2

112869

An electric crimp terminator with compact design features a die set holder that is compatible with all AMP SDE (PRO-CRIMPER III Tool) die sets. Hand- or foot-actuated options are available. CE Approved.

For more information, request Catalog **1654714**.

## Application Tooling (Continued)

### Pneumatic Hand Tool for Interchangeable Die Sets

### 6-26 Pneumatic Tool System

Effortless crimping for a broad range of terminals, either bench-mounted or hand-held for working in cramped quarters.

- Lightweight tool eliminates physical force required by hand tools
- Hand- or foot-switch operation
- Termination wire range from 26-6 AWG [0.12-13.0mm<sup>2</sup>], plus coaxial

and fiber optic cable

- Works with existing AMP-compatible crimp heads and die sets
- Ratchet control option provides complete crimp cycle, eliminating partial crimps
- Use rotating head assembly to reach difficult termination locations

For more information, request Catalog **124208**.

### Battery-Powered Crimp Tool Kits

The Battery-Powered Crimp Tool Kit is a fast, ergonomically-designed tool is ideal for use at the bench, on the line, or in the field. It's completely portable, lightweight (3.48 lbs including battery) and compact. The charge delivers over 100 crimps - charge time is 40 mins. The kit includes the tool, 2 batteries and the charger.

P/N 1213890-1 — SDE Battery Powered Crimp Tool Kit (dies not included)

P/N 1213805-1 — CERTI-CRIMP II, SA Battery Powered Crimp Tool Kit (heads not included)

P/N 1213840-1 — CERTI-CRIMP, Large Die, C-Head Adapter Battery Powered Crimp Tool Kit (dies not included)

P/N 1213819-1 — CERTI-CRIMP, Large Die, Straight-Action Adapter Battery Powered Crimp Tool Kit (dies not included)

For more information, request Catalog **1773381**.

## CRIMP MACHINES

### AMP-O-LECTRIC Model "G" Terminating Machines, Part Nos. 354500-1, -9, -11

Semiautomatic bench machines for crimping reeled terminals and contacts, featuring a quiet and reliable direct motor drive, microprocessor controls for ease of setup and operation, and guarding and lighting designed for operator convenience and safety. All models are equipped with either manual or automatic precision adjustment of crimp height. Machine-mounted sensors are available for crimp quality monitoring using conventional miniature-style applicators.

For more information, request Catalog **1654956-2**, Video **198116**, Catalog **82275 [Crimp Quality Monitor (CQM)]**, Video **198094**.

Note: New Stripping Module available, see page 79.

### AMP-TAPETRONIC Machine, Part No. 69875

AMP-O-LECTRIC Model "K" Terminating Machine with a permanently-mounted applicator that accepts interchangeable die sets to apply a variety of tape-mounted terminals and splices. Many of the die sets can also be used in AMP-O-LECTRIC Terminating Machines with a tape applicator.

For more information, contact Tyco Electronics.

## Application Tooling (Continued)

### Crimp Quality Monitor (CQM)

Part No. 1320420-2

The unique system provides 100% on-the-fly crimp inspection. It measures the crimp height of each termination, and evaluates the quality of each crimp. If a crimp is questionable, the monitor alerts the operator with both visual and audible alarms. It also provides ports for printing and networking. When used with AMP-O-LECTRIC Model "G" Termination Machines, the monitor is mounted to the machine. When used with AMPOMATOR CLS IV Lead Making Machines, it is integrated into the machine's operating system.

For more information, request Catalog **82275**.

### AMP 3K/40 and AMP 5K/40 Terminating Machines

The AMP 3K/40 and AMP 5K/40 Terminators are designed for customers that require the increased output and quality of a semiautomatic machine at a competitive price. By incorporating the most commonly requested features as standard and offering a long list of optional equipment, these terminators offer flexibility to meet the specific needs of various applications at the lowest possible cost.

#### Features

- 3,000 lb [1361 kg] max. crimp force (AMP 3K/40);
- 5,000 lb [2268 kg] max. crimp force (AMP 5K/40)
- Toolless removal of applicators and guards
- Jog capability
- Quiet, fast operation - 80/76 dBA and cycle time less than 0.400 seconds
- Accepts Heavy Duty Mini style applicators
- Wide range of optional equipment such as toolless precision crimp height adjust, batch counter, CQM capability and work light

For more information, request Catalog **1654956-2**.

**Note:** New Stripping Module available, see page 79.

### Crimp Force Monitor (CFM)

Your Quality Program calls for more than a Good Crimping System. It demands proof — the proof you get with the SLE crimp force monitor. It has high-resolution piezo-quartz sensor technology for a more precise identification of typical crimping faults.

Sure, you can sample and test crimp height with a micrometer. In fact, that's how you standardize your process. But for ongoing quality control, testing every crimp, SLE is the choice.

It's known worldwide, and meets our standards or a high performance terminating system. That's how you can be sure.

High quality crimping — with verification — means higher production and productivity.

#### Features

- 1 or 2 Channels
- 128 x 128 Dot Matrix
- Zone & Peak Force Analysis
- Force Trigger
- Encoder Proximity Trigger
- Absolute Force Measurement
- Monitors the wire barrel crimp of open-barrel, uninsulated contacts and terminals
- Real-time monitoring of every crimp
- Special applicators are not required
- Use with the AMP-3K/40 and AMP-5K/40 presses from Tyco Electronics
- Frame-mounted force sensor
- For bench or fully-automatic machines
- Please contact us for any other type of press you would like to use with the CFM

#### Crimp Force Monitor Specifications

- Electrical: 110-230 VAC Single Phase, 50-60 Hz, 15 watts
- Size (Monitor): 178mm x 137mm x 95mm
- Weight (Monitor): 1.02kg (single channel), 1.05kg (double channel)

For more information, request Catalog **1309085-2**

### System III Applicator

The System III Applicator introduces several new technologies into the applicator including a precision servo-electric motorized feeding system, a built-in data module for storing terminal crimp and set-up information, a precision fit round ram, and a newly designed terminal depressor. It still utilizes the proven quality of the HD-M crimper and anvil tooling.

For more information, request Catalog **1654956-8**

## Application Tooling (Continued)

### LEAD MAKERS

#### Komax gamma 333 PC Lead-Making Machine

This fully-automatic, PC-controlled leadmaker can be equipped with up to three processing stations enabling the crimping of both ends of the wire, double-crimp connections with three different contacts, single-ended seal applications, tinning or ink-jet marking. Features include ultra-short conversions times, easy-to-use graphic-based TopWin interface with multiple-language capability, crimp force analyzer with statistical analysis, seal monitoring, and integrated good/bad sorting.

For more information, request Catalog **1307901**.

#### AMPOMATOR System III Leadmaker

The AMPOMATOR System III Leadmaker is designed for the demands of low-volume/high mix manufacturing and precision quality. This leadmaker combines the best wire processing capabilities with new technologies in terminal feeding and machine set-up found in the System III Applicator to offer significant advantages for higher throughput and efficiencies.

For more information, request Catalog **1654956-5**

#### Komax 433-S alpha Lead-Making Machine

The 433-S alpha offers maximum flexibility for applying seals to one or both ends of the wire with the corresponding terminal. When equipped with the mci 711 crimp terminator and mci 761 seal applicator, the fully-automated 433-S alpha forms a highly compact system with optimum accessibility. Dynamic servo-drives provide fine travel settings on all motor axes and the wire straightening unit with quick-release lock and automatic lead-in feature reduces wire changeover time. The TopWin software provides for fast, simple data input.

For more information, request Catalog **1307801**.

### APPLICATORS

#### End-Feed Heavy-Duty Miniature Applicators (coded HDM)

Interchangeable applicators for crimping products reeled end-to-end (primarily open-barrel terminals). Used in bench and lead-making machines; most designs can be used, or adapted for use with minor tooling changes, dial-in settings for different wire sizes and insulation diameters. Mechanical or air-powered feed systems, depending on the product applied.

For more information, request Catalog **296393-2** and Instruction Sheet **408-8039**.

#### EDGE Applicator Counter

The new EDGE counter tracks wearable tool usage for the most effective maintenance planning. The completely electronic counter, with clear LCD display, indicates cycles since installation. By performing maintenance at measured intervals with pre-set limits, operators avoid breakdowns and rejects caused by tool wear or mis-adjustment. A wireless interface transfers counters to a PC running the optional Edge Counter Software Pack.

The EDGE is standard on all new applicators and can be retrofitted to most existing Tyco Electronics applicators.

For more information, request Catalog **1773385**.

#### Side-Feed Heavy-Duty Miniature Applicators (coded HDM)

Interchangeable applicators for crimping products reeled side-by-side on single or dual carrier strips (primarily closed-barrel terminals and open-barrel contacts). Similar design as the end-feed version. All side-feed applicators include a wire stop to help correctly position the wire end in the crimping target area.

For more information, request Catalog **296393-2** and Instruction Sheet **408-8040**.

## Application Tooling (Continued)

### Stripper-Crimper Applicators (coded SCA)

Interchangeable applicators for crimping products in AMP-O-MATIC Stripper-Crimper Machines. Consist of separate ram and lower tooling assemblies. Similar dial-in settings for different wire sizes and insulation diameters as HDM applicators. Available with sensors for use with the Crimp Quality Monitor.

For more information, request Catalog **65004 (AMP-O-MATIC Stripper-Crimper Machines)**, Catalog **82275 [Crimp Quality Monitor (CQM)]**.

### Cosmic 30M Wire Stripping Machine, 5-528367-0

The Cosmic 30M is a high precision, high speed electrical wire stripper that is very easy to operate. It's equipped with a four blade system and an optional gripper for more difficult wires. There is a digital display for the wire diameter that can be set at 0.01 mm increments.

For more information, request Catalog **1773385-2**.

### Cosmic 927R Micro-Cable Stripper

The compact, lightweight, benchtop Cosmic 927R was designed and developed to reliably strip various insulation materials and micro-cable. From conductor diameter 36 to 10 AWG, the stripping diameter display can be set to within 0.1 mm increments.

For more information, request Catalog **1773385-4**.

## STRIPPER-CRIMPER MACHINES

### AMP-O-MATIC Stripper-Crimper Machines, Part Nos. 1320895-1, -2

Semiautomatic bench crimping machines that also strip the wire, and are therefore used for terminating jacketed cable. Feature manual precision adjustment of crimp height, keyed strip blades for faster, more accurate setups, and an efficient scrap removal system. All adjustments can be made from the front of the machines without special tools. Available with crimp quality monitoring.

For more information, request Catalog **65004**, Video **198075**, Catalog **82275 [Crimp Quality Monitor (CQM)]**, Video **198094**.

### Stripping Module (for the AMP 3K/40 and AMP 5K/40 Terminating Machines and AMP-O-LECTRIC Model "G" Terminator on page 77)

The combination of the Stripping Module with the AMP 3K/40 and AMP 5K/40 Terminating Machines or the AMP-O-LECTRIC Model "G" Terminator provides an economic and proficient method of stripping the wire and crimping terminals on the same machine. The module accepts End- and Side-Feed HDM Applicators (32-14 AWG) and operates in three modes: crimp only, strip only, or strip and crimp. It can be installed on existing machines in the field or purchased as one unit from the factory.

For more information, request Catalog **1309085**.

## Technical Documents

The following is a list of technical documents covering the application, performance and maintenance of Metrimate Connectors.

**Product Specifications** describe technical performance characteristics and verification tests. They are intended for the Design, Component and Quality Engineer.

- 108-10033 Metrimate Connectors
- 108-10042 Contacts, Type III+ Stamped and Formed
- 108-12011 Subminiature COAXICON Contacts
- 108-1317 Power Drawer Connectors
- 108-1682 Power Drawer Connectors with .125 POWERBAND Contacts
- 108-1449 Power Drawer with High Current Louvertac Size 8
- 108-10033-1 Metrimate Connectors loaded with contacts

**Application Specifications** describe requirements for using the product in its intended application and/or crimping information. They are intended for the Packaging and Design Engineer and the Machine Setup Person.

- 114-10014 Contacts, Pin and Socket, Power Application of
- 114-10004 Contacts, Type III+
- 114-10039 Drawer Connectors
- 114-10040 Metrimate Connectors
- 114-10043 POWERBAND Contacts

**Instruction Sheets** provide instructions for assembling or applying the product. They are intended for the Manufacturing Assembler or Operator.

- 408-7846 Metrimate Connectors (Square Grid)
- 408-1379 Pin and Socket Contacts
- 408-7347 Insertion Tool 91002-1, Type III+ Contacts
- 408-2024-2 Subminiature COAXICON Contacts, Instruction, Maintenance and Inspection
- 408-1216 Extraction Tool 305183, Type III+ and Subminiature COAXICON Contacts
- 408-4374 Extraction Tool 318813-1
- 408-4391 CERTI-CRIMP SAHT 90716-1
- 408-8547 Operation and Maintenance of CERTI-CRIMP II Straight Action Hand Tools
- 408-7414 CERTI-CRIMP SAHT 90225-2
- 408-9819 PRO-CRIMPER II Hand Tool 58495-1
- 408-1817 Insertion Tool 200893-2
- 408-2095 "C" Head Hand Tool 69710-1
- 408-9930 PRO-CRIMPER II Hand Crimping Tool Frame Assembly 354940-1

**Customer Manuals** provide a compilation of customer prints, product specifications, application specifications, features and benefits, IS sheets, test specifications and could include a product catalog.

- 409-5862 AMP 626 Pneumatic Tool Assemblies

## Part Number Index

Note: This numerical index lists all cataloged part numbers by base number only. Complete part numbers (with prefixes and/or suffixes) are shown on the page indicated.

Part No.	Page No.
